Mphasis
The Next Applied

Snowflake Developer with overall 7+ years of experience in database development, data warehousing, and cloud-based data solutions. Specializing in Oracle to Snowflake migration, Oracle to Sqlserver migration, data replication, and BI integrations, with expertise in implementing Snowflake best practices, connectors, security, and performance optimization.

Work History

Mallikharjunudu G

Snowflake Developer

Skills

- Snowflake
- Python
- Oracle 19c (SQL/PLSQL)
- SQL Server
- Debezium
- SQL Server CDC

2021-09 - Current

Senior Software Engineer

CGI Information Systems, Hyderabad

2019-09 - 2021-09

Software Engineer

CGI Information Systems, Hyderabad

2017-06 - 2020-09

Associate Software Engineer

CGI Information Systems, Hyderabad

Certifications

Machine Learning Certification, Stanford University (Coursera), https://www.coursera.org/account/accomplishments/certificate/P95KTJZUWNSQ

Microsoft Certified: Azure Fundamentals, FFF16D-411PB3

Publications

SVM Regression-Based Robust Image Watermarking Technique in Joint DWT-DCT Domain, G. Mallikharjunudu, M. Islam, A. S. Parmar, A. Kumar and R. H. Laskar, IEEE ICICICT 2017, https://ieeexplore.ieee.org/document/8342779?fbclid=IwAR2zLWmbSh7PxgW7vT9Y_ErHkx%20N38NsbdcKB7HGcqmV4ytapP1hwYGitry8

Awards

- Stellar Award, 01/01/24, Received for high-quality service delivery and innovation in Snowflake migration.
- Successfully optimized Snowflake costs by monitoring query performance and warehouse utilization.

- Power BI
- Shell Scripting
- PL/SQL
- Jenkins
- Git
- Snowflake
- Windows
- Linux

- Advantage AI Hackathon, participated in developing an AI-driven automated diagnosis and resolution system.

Roles And Responsibilities

- Designed and implemented Snowflake security policies, RBAC, and access control models to comply with data governance policies.
- Lead a team in the adoption of Snowflake's ZeroCopy Cloning feature for testing purposes, which cut down the release cycle time by 25%.
- Monitored and optimized Snowflake warehouse performance by analyzing query history, autosuspend settings, and scaling policies to reduce costs and improve efficiency.
- Expertly optimized data storage and compute resources in Snowflake, implementing a novel data clustering approach that increased query performance by over 35%.
- Configured Debezium for real-time change data capture (CDC) replication from SQL Server and Oracle to Snowflake.
- Led Oracle to Snowflake migration projects, transforming on-premises data warehouse solutions into scalable, cloud-based architectures.
- Developed efficient data pipelines using Snowflake Streams & Tasks to support automated data ingestion and processing.
- Integrated Power BI with Snowflake using optimized Snowflake SQL queries for better dashboard performance.
- Scheduled and automated ETL processes using Snowflake Tasks, ensuring timely data refresh for reporting.
- Designed and maintained data assurance and validation scripts to ensure consistency during migration and replication.

- Worked closely with product teams to optimize Snowflake warehouse usage and cost by fine-tuning queries and resource allocation.
- Provided technical documentation, training, and knowledge-sharing sessions on Snowflake best practices across teams.
- Managed and supported 30+ Oracle and SQL Server databases in a high-availability environment.
- Implemented database replication and CDC pipelines to support real-time data synchronization.
- Conducted database performance tuning, optimizing SQL queries and indexing strategies.
- Created and maintained backup & recovery procedures using RMAN and automated scripts.
- Assisted in upgrading Oracle databases from 11g to 12c and later versions.
- Provided support for database security, user management, and access control.
