EDUCATION

Bachelor of Technology | Computer Science

Acropolis Institute of Technology and Research
2018-2022

SKILLS

Languages :
JAVA, J2EE , PL/SQL, Angular 15+, HTML/SCSS/ Typescript

Technologies :
Spring Boot, Spring MVC, JDBC, JPA, Hibernate, RESTful APIs, MySQL, PostgreSql, MongoDB and Redis, Maven , Gradle, Microservices, CI/CD

Tools :
IntelliJ, DBeaver, GIT, JIRA, Jenkins, Git, Postman, Visual Studio Code

Project Management :
Agile Methodology, SDLC

ACHIEVEMENTS

- Travelled to Germany for Client visit and recognized by product owner for seamless presentation on business solution.
- Move the Dot - [Collaboration, Client- Centric and Commitment to People]
- Appreciated by client in solving complex POC in Sprint Review meeting.

PROFILE

Experienced Java Full Stack Developer with 3+ years of expertise in software development. Proficient in building scalable, high-performance backend systems using Spring Boot and developing dynamic Single Page Applications (SPA) with Angular. Strong experience working with relational databases such as MySQL and PostgreSQL. Has contributed to diverse projects across industries, including banking, automotive, flight ticket processing, manufacturing & inventory management, and digital pricing repositories. Well-versed in the SDLC and skilled in implementing Continuous Integration/Continuous Deployment (CI/CD) practices within an Agile environment.

WORK EXPERIENCE

Java Full Stack Developer
2024 - PRESENT

Deloitte

- Developed a highly scalable, centralized release delivery orchestrator using a microservice architecture, providing real-time insights across projects and repositories with seamless performance and high availability.
- Managed project tasks and user stories using JIRA and integrated real-time data ingestion via Jira and Bitbucket GraphQL APIs through a Spring Boot WebFlux-based push mechanism, ensuring smooth Agile communication and tracking.
- Implemented CI/CD pipelines using a Jenkins wrapper, combined with Spinnaker and Terraform, to enable automated, on-demand AWS infrastructure provisioning and faster, more reliable software releases.

Analyst / Software Engineer
2022 - 2024

Capgemini

- Designed and developed backend services that processed large datasets to deliver actionable business insights and provide tailored solutions to meet client needs.
- Implemented performance optimization strategies to enhance system efficiency, reliability, and scalability, promoting continuous integration to streamline development and deployment workflows.
- Led the development of web-based applications, creating intuitive interfaces that enabled clients to efficiently capture and manage their data.

PROJECTS

Centralized Release Delivery Orchestrator (Client - JPMC)

Contributed as a full stack developer to a centralized release delivery orchestrator platform providing real-time visibility into the end-to-end software delivery lifecycle from development to production across 200+ projects and 5000+ repositories. The platform enables role-based access control, allowing users to drill down into specific delivery stages.

Key Responsibilities:

- Engineered a real-time event ingestion pipeline using AWS Managed Kafka (MKS), Jira, and Bitbucket GraphQL APIs through a push-based architecture built on Spring Boot WebFlux.
- Designed and developed an intuitive, responsive front-end using React.js.
- Implemented a Jenkins wrapper to streamline CI/CD processes and integrated Spinnaker pipelines with Terraform for on-demand AWS infrastructure provisioning.

Automobile Industry (based in **Germany**)

- Developed highly scalable application with Microservice architecture using Quarkus, Angular and PostgreSql.
- Effectively managed projects tasks/stories and workflow using JIRA. Ensuring clear communication and efficient project tracking in a highly Agile environment also delivering timely software iterations to meet the client requirements.
- Used CI/CD processes using Jenkins for streamlining the development and deployment pipelines.

Aviation Industry (based in **USA**)

- Developed a Refund Accounting System (RAC) using technologies: Spring boot, Angular 15, JPA, Docker, Kubernetes, Azure Service Bus.
- Implemented application metrics monitoring system using Azure Service Bus, ADX, and KQL queries.
- Used CI/CD processes via GitHub Actions to enhance the development and delivery

Telecommunications

- Worked on Digital Pricing Repository Management application, handing backend Java interfaces built on Microservice architecture, designing purely performance centric system to provide seamless data processing via Java-based RESTful web services.
- Collaborating with a cross-functional team to design and develop key features that enhanced digital pricing management for the client, ensuring seamless data processing, accurate data storage and retrieval.
- Used AWS Services for deployment, optimizing the app's scalability, availability, and performance using AWS cloud-native services.
