RUTUJA JADE

Software Engineer | Backend & Full-Stack Developer | 5 Years | Healthcare IT
+91 8805046240 | rutujajade948@gmail.com | linkedin.com/in/rutuja-jade | Pune, India

PROFESSIONAL SUMMARY

Software Engineer with 5 years of experience building scalable backend microservices and full-stack web applications in the healthcare technology domain. Skilled in Java (8/11/17), Spring Boot, Microservices, Angular 17, and REST API design. Experienced with AI-assisted development tools including Windsurf and Claude Code to speed up development, automate code review, and streamline deployments. Delivered measurable results including 20% system efficiency improvement, 40% database query optimization, 30% UI rendering improvement, and 99.9% production uptime. Knowledgeable in cloud-native deployment (AWS S3, Docker) and healthcare interoperability standards (FHIR, HL7, ABDM, HCX).

TECHNICAL SKILLS

Languages: Java 8, Java 11, Java 17, TypeScript, HTML5, CSS3

Backend: Spring Boot, Spring MVC, Microservices Architecture, Hibernate, JPA, REST APIs, Apache Kafka

Frontend: Angular 17, Bootstrap 5

Databases: MySQL (indexing, query optimization, schema design), MongoDB (NoSQL)

Cloud and DevOps: AWS S3, Docker, Jenkins, CI/CD Pipelines, Git, GitHub

Testing and Tools: JUnit 5, Mockito, Postman, JIRA, Gradle, WinSCP, PuTTY, SVN

Design Patterns: MVC, DAO, Front Controller, Factory, Singleton

Healthcare Domain: FHIR, HL7 Standards, ABDM (Ayushman Bharat Digital Mission), Health Claim Exchange (HCX)

AI and Developer Tools: Windsurf (Codeium), Claude Code (Anthropic), Cursor, Prompt Engineering, LLM-assisted CI/CD, Copilot

Practices: Agile, Scrum, TDD, Code Review, System Design, API Documentation

PROFESSIONAL EXPERIENCE

Software Engineer — Suma Soft Pvt Ltd *Sep 2021 - Present | Pune, India*

- Engineered 5+ production-grade distributed applications using Java, Spring Boot, and Spring MVC, improving system throughput and efficiency by 20% through architectural refactoring and codebase optimization.
- Designed and developed 40+ RESTful microservice APIs supporting high-concurrency data exchange across distributed systems and third-party healthcare integrations, following OpenAPI standards and REST best practices.
- Reduced average MySQL and MongoDB query response time by 40% through strategic indexing, query restructuring, and schema normalization across healthcare transaction datasets.
- Built Angular 17 front-end modules with optimized change detection and lazy loading, improving UI rendering performance by 30% on data-heavy clinical workflows.
- Resolved 30+ critical production incidents through root cause analysis and preventive fixes, maintaining 99.9% uptime SLA while communicating proactively with clients.
- Wrote unit and integration test suites using JUnit 5 and Mockito, achieving high code coverage and enabling reliable CI/CD deployments with minimal downtime.
- Partnered with Product Managers and cross-functional teams in Agile sprints to translate business requirements into technical specifications and deliver features on schedule.
- Applied Java EE design patterns (MVC, DAO, Front Controller) to build clean, maintainable, and testable codebases aligned with SOLID principles.
- Adopted AI-assisted development practices using Windsurf and Claude Code, reducing boilerplate code generation time by approximately 40% and improving code review turnaround.
- Used Claude Code within deployment pipelines for automated script generation, debugging support, and infrastructure-as-code tasks, reducing manual DevOps effort.

KEY PROJECTS

HCX - Health Claim Exchange Platform

Tech Stack: Java 17, Spring Boot 3.3.4, Microservices, Angular 17, MySQL, AWS S3, Docker, Gradle, Postman

Cashless health insurance claim platform enabling hospitals to submit and settle insurance claims directly with insurers, removing the need for manual patient-side claim management.

- Architected and built Spring Boot microservices for end-to-end claim submission, validation, and settlement workflows, supporting concurrent traffic from multiple hospital and insurer integrations.
- Designed FHIR/HL7-compliant MySQL schemas and optimized queries for high-throughput healthcare transaction processing, cutting data access latency by 35%.
- Integrated AWS S3 for scalable document and file storage, and containerized services with Docker for consistent, reproducible deployments across dev, staging, and production environments.
- Authored complete REST API documentation in Postman, working with the Product Manager to iteratively define technical specifications across Agile sprints.

ABDM NHA - Patient Health Data Transfer (OneHCX Connector)

Tech Stack: Java 8/11, Spring Boot, Microservices, Angular 17, MySQL, AWS S3, FHIR/HL7, Bootstrap

Government-mandated, ABDM-compliant digital health data exchange platform enabling secure data flow across hospitals, labs, and insurers. Delivered modules M1-M3 for national ABDM Sandbox certification.

- Built M1-M3 modules using Spring Boot microservices and Angular 17 to support ABDM-compliant patient data flows, including consent management, patient discovery, and health record linking.
- Developed secure REST APIs integrating with the ABDM Gateway and HFR/HIP APIs, implementing OAuth authentication and TLS security protocols.
- Designed and validated end-to-end MySQL schemas for ABDM Sandbox certification using Postman automation; used AWS S3 and Google Cloud for scalable file storage.

Dusmile - Automated Field Investigation and Workflow Engine

Tech Stack: Java, Spring Boot, Angular, MySQL, Gradle, Postman, PuTTY

Multi-tenant workflow automation engine built for finance companies to manage two-wheeler vehicle financing, field investigation surveys, and structured report generation.

- Designed and implemented RESTful APIs with complete documentation aligned to client specifications, enabling workflow automation across 3 finance company verticals.
- Managed zero-downtime deployments and release cycles; led sprint-end demos with stakeholders to gather feedback and reprioritize the backlog.

EDUCATION

Bachelor of Engineering, Computer Science *2015 - 2021*

Dr. D Y Patil School of Engineering, Pune

ADDITIONAL INFORMATION

- Daily user of Windsurf and Claude Code for intelligent code completion, automated refactoring, LLM-assisted debugging, and deployment script generation.
- Contributed to AI-first architecture patterns, integrating LLM tooling into development and CI/CD workflows to reduce iteration cycles and improve developer productivity.
- Active competitive Java programmer on GeeksforGeeks and HackerRank, practicing data structures, algorithms, dynamic programming, and system design.
- Attended FHIR and ABDM seminars to stay current with healthcare interoperability standards and national digital health initiatives.
